

Sound Package for SAM5000 series ICs

Dream-AcousticDrums-5000© package is a sound library of professional acoustic drum sounds. It has been specially designed to be used in digital drums and other musical instruments using Dream© SAM5000 series of proprietary DSPs.

Dream-AcousticDrums-5000© contains 241 carefully recorded and edited drum sounds and variations:

- 16 Kick sounds

dream

- 24 Snare, Snare Rim Shot and Cross Stick sounds
- 63 Tom and Tom Rim Shot sounds
- 21 Ride Cymbal sounds (bell, shoulder, edge)
- 41 Crash Cymbal, Splash and China sounds
- 76 Hi-Hat sounds (shoulder, edge, foot chick, foot splash, many opening positions ...)

Different styles are covered by the Dream-AcousticDrum® packages, such as Rock, Pop, Vintage Rock, Jazz, RnB, Motown, Indy Rock ...

For this package, we have asked one of the most famous French drummer Matthieu Rabate to record his finest and acknowledged drum kits to cover a wide variety of musical styles. All the sounds have been multi-sampled in a professional studio with high class equipment.

Features

- All samples have been processed while respecting the acoustic feel. Samples have not been looped, and kept to their natural length (just slightly faded for a few).
- Snares are given with their rim and cross-stick sounds, Toms with different variations of rim sounds, Ride and Crash cymbals with their edge sounds, Ride cymbals also with bell (cup) sounds
- Different openings of Hi-Hats are provided to reproduce the natural Hi-Hats action
- Sounds can be adjusted using Dream Drumset Editor (decay, level & panning balance etc.)

How to use the Sound list table

Instrument Name: is the name you will find while importing the sounds from Dream Bank Compiler or Drumset Editor. **Style:** is an indication of the music style which matches the best the drum kit

Description: gives you the size, brand and model of the recorded drum kit element

Wav Nb: indicates the number of samples used for the current drum element, usually it is the number of velocity layers Size (kB): total size in kilo-Bytes of current drum element

HdRoom (dB): indicates the available headroom on each drum instrument (for use in Bank Compiler / Drumset Editor)

Some sounds such as the Boutique Snare, or the Tom Rimshot RLS are using a bigger number of samples to make use of Dream Round Robbin / Random Algorithms used to add naturalness.

TOM SOUNDS

Regular Tom rim shots have a consistent sound of the ringing rim mixed with the head sound at lower volume. "RLS" variations of Tom rim shots will produce the rim sound only velocities lower than 64, above 64, the sound of the tom head will start to be mixed with the rim sound.
